

SURFACE MOUNT PALLETS

Successful SDM circuit carrier implementation is relevant to the circuit design, array layout, rigid or flex. Stone Mountain Tool is happy to review design layout early in the circuit development process to possibly enhance the success of the manufacturing processes. Exclusive "Push Away Tooling Pins" are used to locate the PCB while the use of the vacuum from your machine can be transferred through the pallet keep the substrate on the fixture. Clamping the flex circuit for pick & place and reflow may be done with the use of a variety of different clamp designs. The clamps are manually engaged post screen-print on the exit rails of the printer. The circuit stays precisely located and positively secured to a precise flat surface during the surface mount technology manufacturing process with pallets designed by Stone Mountain Tool.
